

Device Support

Profiles

NOC's device support is implemented via *profiles*. Profile contains description of device personality (supported access methods, various prompt settings, session setup/shutdown sequences etc). Profiles are named like *<vendor>.<software name>* (i.e *Cisco.IOS*, *Juniper.JUNOS*, *Force10.FTOS*)

Scripts

Each profile contains collection of scripts, each serving particular task. Each script implements *Interface*. Scripts are named like *<profile>.<script>* (i.e. *Cisco.IOS.get_version*, *Juniper.JUNOS.get_version*, both of [IGetVersion](#) interface).
