

Virtual Circuits Management

NOC's Virtual Circuits Management helps you to organize and operate all your virtual circuits (VLANS, DLCIs, MSPL LSPs) in clean an effective way.

Distinctive features of NOC's VC Management are:

- Intuitive clean web interface
- High performance, helping to maintain 10,000+ VCs
- VCs can be split in separate independent VC domains, possibly with overlapping labels
- Automatic VLAN rollout/provisioning permits to synchronize VLANs on switches with database
- [Address Space Management](#) integration helps to bind particular VC with address block
- [Service Activation](#) integration
- Fully scriptable for transparent enterprise workflow integration

NOC's VC Management is successively used in large ISP networks, datacenters and in high-load online projects.
