

Internationalization and localization

I18N

Strings in python modules and HTML templates must be marked in order to be translated to different languages. Please refer to the excelleng [Django's internationalization reference](#) for details.

L10N

In order to perform translation to specific language (*ru* in example) create the language file:

```
/opt/noc# ./scripts/makemessages ru
```

Resulting language file will be placed into `locale/_ru_/LC_MESSAGES/django.po`

Edit the message file and compile it:

```
/opt/noc# python manage.py compilemessages
```

Commit `django.po` and resulting `django.mo` to the repo.

To refresh message file also use:

```
/opt/noc# ./scripts/makemessages ru
```
