

Virtual Appliance Quickstart (deprecated)

Setting up and booting image

1. Download current VM image from NOC CDN
2. Import image into VirtualBox ("File > Import appliance")
3. In VM settings go to the "Network" tab, ensure the "Adapter 1" is enabled, attached to "Bridged Adapter" and mapped to real network interface

4. Boot up VM image

Access NOC

Default console login credentials are:

```
Username: user
Password: thenocproject
Root password: thenocproject
```

System set up to get IP addresses via DHCP and will display obtained address into console.
