

0.2.7

0.2.7 (05-AUG-2009)

Main

====

- * Flexible notification mechanism with Time Patterns and Notification Groups and noc-notifier daemon
- * User Profiles
- * noc-launcher can set up daemons user and group ids
- * DeprecationWarnings on python 2.6 are removed
- * Record preview in Reference Books
- * Old backup removal
- * All daemons silently exit on SIGINT signal
- * All daemons accept --version key
- * manage.py "build-manifest" command

Service Activation

=====

- * Optional SSL encryption of SAE-Activator stream
- * DLink.DGS3xxx profile now supports DGS3100

Configuration Management

=====

- * Do not raise exception on yet-not-read config previewing

Fault Management

=====

- * Ping only active managed objects
- * Managed Object lookup is case insensitive now
- * Case-insensitive search over Managed Objects in event filter
- * New event classes: "Config Synced", "Bad DNS Query"
- * New classification rules for Cisco.IOS
- * Repeat protection for "Invalid Event Source" event

Peering Management

=====

- * Configurable RPSL's pref= semantics (localpref or 65535-localpref)

Knowledge Base

=====

- * "reserved" attribute of "allocation" tag in "rack" macro
