

Peering Management

Overview

Peering management. Contains database of major peering objects:

- Maintainers
- Persons
- Autonomous systems
- AS-Sets
- BGP peers
- Communities

Generates valid RPSL representation for database objects.

Generates optimized BGP filters. Provides integrated looking glass for debugging purposes.

RPSL representation and prefix-lists are stored in cm repo to track changes.

Terminology

- RPSL
- Peering Point
- import filter
- export filter
